Wolters Kluwer (București) in București, România

Senior Engineer / PHP Developer

Noiembrie 2022 - Iulie 2023   8 luni

As a PHP Developer with expertise in the LexForce tool, I am part of a collaborative team responsible for developing and maintaining web applications using PHP programming language within the LexForce tool. My role involves actively contributing to the team's objectives and ensuring successful project delivery.

Key Responsibilities:

LexForce Development: Collaborating with the team to design, develop, and enhance web application using PHP within the LexForce tool. Contributing to the codebase by writing efficient, maintainable, and high-quality code. Integrating with various APIs and services to extend the functionality of the LexForce platform.

Database Development: Working closely with the team to design and optimize database schemas, write SQL queries, and implement robust data models that align with the requirements for the LexForce tool. Ensuring data integrity and performance through effective database management.

Linux Server Administration: Assisting the team with light Linux server administration tasks related to application configuration. Contributing to the setup and maintenance of server environments, ensuring proper web server configuration, and resolving any server-related issues that may arise during development or deployment.

Environment development using docker, setting up configuration for app specific settings and packages used in LexForce.

Workflow Optimization using Git: Collaborating with the team to optimize the development workflow using Git. Adhering to Git best practices by creating branches, committing code changes, merging branches, and resolving conflicts effectively. Ensuring efficient collaboration and version control within the team.
